Average Plasma Blood Glucose level	122.06	mg/dL	90 - 120 Very Good Control 121 - 150 Adequate Control 151 - 180 Suboptimal Control 181 - 210 Poor Control >211 Very Poor Control

Ion exchange H.P.L.C. with EDTA

Ion exchange H.P.L.C. with EDTA

Interpretation:

Hemoglobin A1c % Degree of Glucose Control

>8 Action Suggested

<7 Goal

<6 Non-Diabetic Level

NOTE : Average blood glucose level done by calculation.

Clinical Information: Glycated hemoglobin testing is recommended for both (a) checking blood sugar control in people who might be pre-diabetic and (b) monitoring blood sugar control in patients with more elevated levels, termed diabetes mellitus. The American Diabetes Association guidelines suggest that the glycosylated hemoglobin test be performed at least two times a year in patients with diabetes that are meeting treatment goals (and that have stable glycemic control) and quarterly in patients with diabetes whose therapy has changed or that are not meeting glycemic goals. Glycated hemoglobin measurement is not appropriate where there has been a change in diet or treatment within 6 weeks. Hence, people with recent blood loss, hemolytic anemia, or genetic differences in the hemoglobin molecule (hemoglobinopathy) such as sickle-cell disease and other conditions, as well as those that have donated blood recently, are not suitable for this test.

[Methodology: SGOT, SGPT: IFCC without PDP; ALKP: IFCC with AMP; TBI,DBI:Diazo;TP:Biuret; ALB, GLB:BCG with Serum]

- Mildly elevated ALT level (less than 1.5 times normal) Alcoholic hepatitis** :ALT value could be normal for gender, ethnicity or body mass index.Consider muscle Laboratory can appear cholestatic, and symptoms can mimic cholecystitis.Minimal elevations of AST and ALT AST and ALT often occur.
- AST level greater than 500 U per L**: The AST elevation is unlikely to result from alcohol intake alone. In a heavy drinker,toxicity. **3. Common bile duct stone**: Condition can simulate acute hepatitis AST and ALT become elevated immediately, but elevation of AP and GGT is delayed.
- Isolated elevation of syndrome or hemolysis unconjugated bilirubin level**: Consider Gilbert syndrome or hemolysis.
- Low albumin level malnutrition** :Low albumin is most often caused by acute or chronic inflammation, urinary loss severe or liver disease; it is sometimes caused by gastrointestinal loss Normal values are lower in pregnancy.

Hormones & Markers

Parameter	Value	Unit	Biological Reference Range
-----------	-------	------	----------------------------

THYROID PROFILE

 Triiodothyronine (T3)	1.19	ng/mL	0.70-2.04
 Thyroxine (T4)	8.65	ug/dL	4.82-13.29
 TSH	1.880	μIU/mL	0.38-5.33

Method - Chemiluminescence with Serum

NOTE: In pregnancy total T3,T4 increase to 1.5 times the normal range.

Reference Range (T3): Premature Infants 26-30 Weeks ,3-4 days 0.24 - 1.32 ng/ml
Full-Term Infants 1-3 days 0.89 - 4.05 ng/ml
1 Week 0.91 - 3.00 ng/ml
1- 11 Months 0.85 - 2.50 ng/ml
Prepubertal Children 1.19 - 2.18 ng/ml

Reference Ranges (T4): Premature Infants 26-30 weeks ,3-4 days 2.60 - 14.0 ug/dl
Full -Term Infants 1-3 days 8.20 - 19.9 ug/dl
1 weeks 6.00 - 15.9 ug/dl
1-11 Months 6.10 - 14.9 ug/dl
Prepubertal children 12 months-2yrs 6.80 - 13.5 ug/dl
Prepubertal children 3-9 yrs 5.50 - 12.8 ug/dl

Reference Ranges (TSH): Premature 28-36 Weeks: 0.7-27 μIU/mL,
Children
Birth 4 Days: 1.0-39 μIU/mL
2-20 weeks: 1.7-9.1 μIU/mL
21 weeks -20 years: 0.7-64 μIU/mL

Pregnancy First Trimester 0.3 - 4.5 μIU/mL
Second Trimester 0.5 - 4.6 μIU/mL
Third Trimester 0.8 - 5.2 μIU/mL

Reference for Biological Reference Interval: Tietz sixth edition

Primary malfunction of the thyroid gland may result in hyper or low release of T3 or T4 In addition as TSH directly affect thyroid function malfunction of the pituitary or the hypothalamus influences the thyroid gland activity. Disease in any portion of the thyroid pituitary hypothalamus system may influence the level of T3 and T4 in the blood in Primary hypo thyroidism TSH levels are significantly elevated while in secondary and tertiary hypothyroidism TSH levels may be low.

Hormones & Markers

Parameter	Value	Unit	Biological Reference Range
VITAMIN - B12			
B12	100	pg/mL	120 - 914

Method - Chemiluminescence with Serum

Interpretation:

Reduced levels of vitamin B 12 may indicate the presence of vitamin dependant anemia. Elevated of Vitamin B 12 have been associated with pregnancy, the use of oral contraceptives and multi-vitamins and in myoproliferative disease such as chronic granulocytic leukemia and myelomonocytic leukemia. An elevated level of Vit. B 12 is not known to clinical problems. Measurement of Vitamin B 12 is intended to identify and monitor Vitamin B 12 deficiency. This can arise from the following :
? Defect in secretion of intrinsic factor, resulting in inadequate absorption from food (pernicious anemia).
? Gastrectomy and malabsorption due to surgical resection and
? A variety of bacterial or inflammatory disease affecting the small intestine.

 25 Oh Vitamin D3	14.25	ng/mL	DEFICIENT <20 INSUFFICIENT 20 - 30 SUFFICIENT 30 - 100 UPPER SAFETY LIMIT >100

Method - Chemiluminescence with Serum

Clinical Information :Vitamin D deficiency is a cause of secondary hyperparathyroidism and diseases related to impaired bone metabolism.Reduced 25-OH vitamin D concentration in blood (vitamin D insufficiency) have been associated with anincreasing risk of many chronic illnesses, including common cancers, autoimmune or infectious diseases or cardiovascularproblems. The major storage form of vitamin D is 25 -OH vitamin D and is present in blood at up to 1000 fold higher concentration compared to the active 125 (OH) - vitamin D .

Hormones & Markers

Parameter	Value	Unit	Biological Reference Range
TESTOSTERONE (TOTAL)			
 Testosterone	375.21	ng/dL	Adult -175-781

Method - Chemiluminescence with Serum

Clinical Information: Testosterone is produced by adrenals, theca cell in the ovary and the leydin cells in the testes. As much as 97% of circulating testosterone is bound to serum proteins such as sex hormone binding globulin (SHBG). In the male testosterone stimulates the maturation of genital and secondary sexual characteristics and its measurement is used to investigate sexual dysfunction in juveniles and adults. In females testosterone levels are much lower and an elevated level may indicate polycystic ovarian syndrome among other conditions. Clinical symptoms of testosterone excess in females include infertility, amenorrhea, obesity and hirsutism.

----- End of Report -----

Results relate only to the sample as received. Kindly correlate with clinical condition

Note : If the test results are alarming or unexpected, Client is advised to contact the Physician immediately for possible remedial action.
